EVALUATION SUMMARY

Mission BX-6851

1. Processing and Titling - Field
2. Physical Condition - Good
3. Hypo Retention Rewashing required (Patch 3, HT-2 test)
4. Exposure (based on density) - Medium
5. General Comments:
 - A. Total mission contained 14 parts.
 - B. Part 8 required dual printing.
 - C. Dye retention was prevalent throughout the mission. It was reprocessed to remove excess dye.
 - D. Estimated cloud cover and/or water is 75%. 7 parts were 100% clouds and/or water.
 - E. Small emulsion skip type defect on Part 13, Frames 971-974. (Pictures recorded)
 - F. A few frames show evidence of erratic film tracking (camera); example: Part 9, Frames 609-628, Part 14, Frames 1038-1040.
 - G. Part 6, Frame 397 contained an ultrasonic splice. The splice apparently was not taped (reinforced) at presplice.
 - H. A few frames contain the clock in the format.
 - I. A small amount of pinholes was observed intermittently throughout the mission.
 - J. The first and last frames of most parts show evidence of handling marks. These are attributed to inserting grids and replacing idents in house.

 MISSION NO. BX-6851 EVALUATION REPORT

Evaluated By Q.C. TechniciansCamera Fwd/AftEvaluation Date 22 February 1968Emulsion 3404

Film Metering	Normal for system
Film Tracking	Good
Clock Exposure	Good
Counter Operation	Operational
Data Chamber (image quality)	Good
Apparent Resolution	Normal
Apparent Granularity	Normal
Density	Medium to slightly heavy
Contrast	Normal

Discrepancies:

<u>Part</u>	<u>Frames</u>	<u>Comments</u>
1	1-76 2-12	Intermittent edge wrinkle Fog
2		
3		
4		
5	378 380	HT-2 test spot Cinch mark
6	405 406	Cinch mark Ultrasonic splice
7	457-532	Emulsion scratch
8	533-608	Intermittent emulsion scratch
9		
10	685-752 685,688 686 748 741-751	Intermittent emulsion scratch Embedded dirt, abrasions, splice Abrasions HT-2 test spot Fog
